**Meet the Team!**

# The Problem & Our Solution

The value proposition of Mora is to save the **language learner of all levels who loves watching TV and movies** from the **tedious, decontextualized language learning techniques** of old.

Mora is a companion for streaming which **interrupts** your watching with **live language lessons** and links to an app which summarizes your stats, **curates review material** for your favorite shows, and **connects you to interest-based communities** of language learners to bond and/or **compete** live with.

# Values in Design

## Educational

Users are able to learn relevant and useful language skills from Mora.

## Fun

Users think Mora is fun and want to use it in their free time.

## Inclusive

Users of all levels and backgrounds feel the Mora experience meets their needs.

# Tensions

- “Fun” for one person may be uncomfortable for others (ex. competition)
- Balancing fun of watching TV with real learning experience

# Values in Design

Value:	Design Features:
<b>Educational</b>	<ul style="list-style-type: none"><li>- Contextual <b>lessons</b> based on user's TV/movie interests and related quizzes</li><li>- <b>Chat</b> for conversational learning with other users</li><li>- <b>Settings</b> page to adjust complexity/difficulty to personal level of learning</li></ul>
<b>Fun</b>	<ul style="list-style-type: none"><li>- <b>Games</b> and <b>competition</b></li><li>- <b>TV</b> – your <i>own</i> show of choice allows users to define own fun</li><li>- <b>Chat</b> with other users to engage in your interests</li></ul>
<b>Inclusive</b>	<ul style="list-style-type: none"><li>- Language lessons <b>tailored to users'</b> ability, interests, needs</li><li>- All competition, conversation = <b>opt-in</b></li><li>- <b>Multimodal</b> (audio, visual, haptic) interface for lesson notification</li><li>- Media-based study sets available to those <b>without streaming access</b></li><li>- <b>Redundancy</b> of meaning of red/green features</li></ul>

Salut!

# TASKS

**\* no changes from Low-Fi.**

# Simple Task

Engage with entertainment of choice and learn from the interactive lesson.

## Moderate Task

Review previously seen material through in-app practice.

## Complex Task

Organize a synchronous, optionally competitive watch party for your media-language community.

Salut!

# USABILITY

# Y

Goals & Measurements

# 1: FUN

vs

the average language learning experience  
(measured 1-5)

## 2: EAGERNESS

to use the app  
(measured 1-5)

## 3: INTUITIVE

to navigate the app  
(measured by # misclicks)

# Progress towards... FUN

- All channels are **opt in** (fun for some is other people, and for some it is not)
- Mora **recommends users shows** they may be interested in (encourages TV watching, not just learning)
- **Progress bars** add to gamification of learning experience

# Progress towards... **EAGERNESS**

- **Customizable** language learning experience (a common complaint from low-fi)
  - Difficulty levels
  - Frequency of lessons
  - Interruptions vs Suggestions (more user agency)
- **Word of the day** brings users a daily feature

# Progress towards... INTUITIVE

- New **pair to screen button**
- **Tab navigation** system (options accessible throughout app)
- Arrow buttons **more descriptive**

Salut!

# MAJOR CHANGES

# 1. Onboarding

- Make user aware of how Mora works: we will be interrupting your streaming with lessons
- Give initial explanation of setup and customization

Goal progress:

- Intuitive: users know initial premise of app
- Eagerness: users are immediately aware that they can customize language learning settings

## 2. Customization

- Customization settings for every time you use Mora while watching
- Difficulty: how hard is your vocab?
- Frequency: how often are lessons?
- New feature: suggestions instead of interruptions allow user to reject lessons if they want to keep watching

Goal progress:

- Eagerness: users can customize language learning settings
- Fun: users have agency in how much learning they do, mitigating potential annoyances at unavoidable lessons

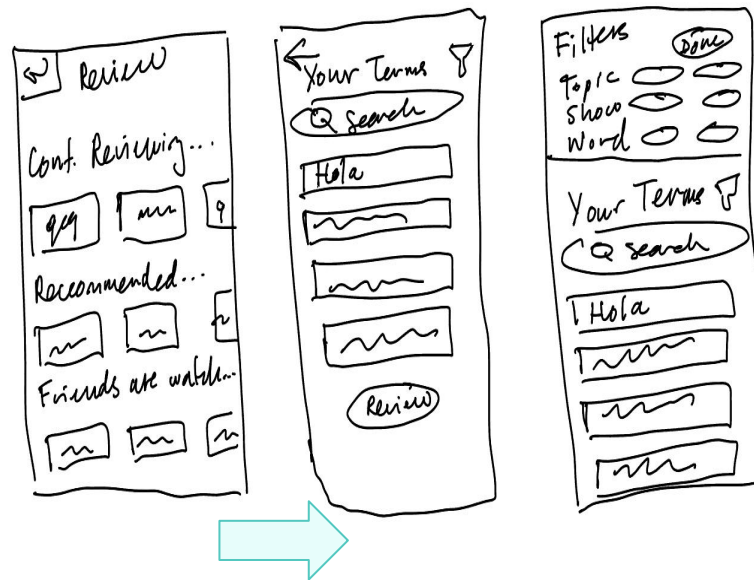

### 3. Review by Term

- Allow users to review vocab by term, theme, or show (instead of only show)
- Vocab still connected to shows it came from to contextualize it

Goal progress:

- Intuitive: users can study vocab based on how difficult it is for them, a general theme, or the context of the show
- Intuitive: users have more agency in filters, making the user experience more natural

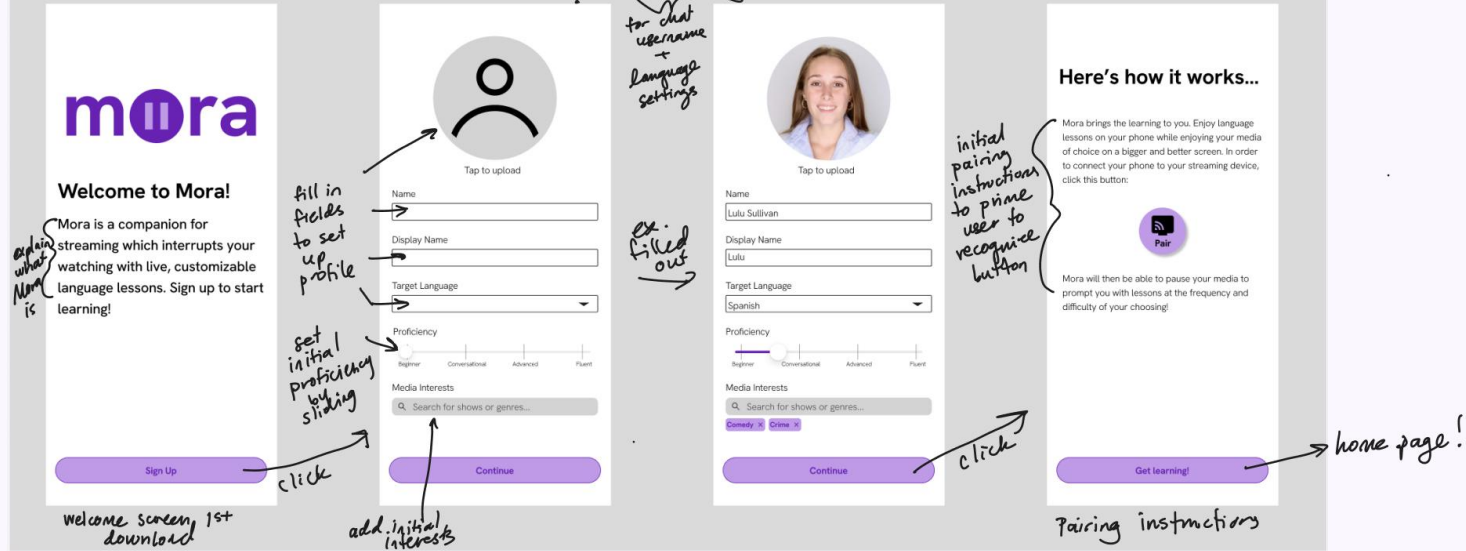

Salut!

# PROTOTYP E

# Tools

**Figma:** We chose to use Figma for our Med-Fi Prototype because it is an industry standard for designing phone app screens in relatively high fidelity without implementing any backend.

## Pros:

- Lots of capabilities including transitions, phone frames etc that replicate real phone app
- Tools like components and grids make design easier

## Cons:

- Steep learning curve to effectively use
- Using built-in assets may curb creativity

# Limitations

- **No real conversational element:** we couldn't create an interface where users could interact with other users
- **No live TV component:** unlike the low-fi prototype, we couldn't implement a real live TV component without a "Computer" pressing play/pause or creating a bluetooth backend
- **No real customization:** while there is now a screen for customization, we could not implement personalized language learning levels (or even real choice in TV show) without an AI lesson creator
- **No audio/haptic feedback:** multimodal quiz notifications don't have audio or buzzing features.

# Hard-coded/Wizard of Oz

- Only one option for language you learn, difficulty, frequency of lessons, etc hard-coded in
- All profile information is hard-coded
- Pairing of devices is not real
- All chosen pause moments and words are hard-coded
- Typing answers/drag and drop answers are hard-coded
- Typing chats is hard-coded
- Choosing show is hard-coded
- Standings and stats are not real and are hard-coded
- Must interrupt instead of suggest because screen is not actually paired to phone

Ciao!

Hola

Salut!

# Appendix

# Major changes (cont.)

## 4. Pair to Screen

- Floating pair to screen icon always accessible to start watching whenever
- “Pair” and computer image to double add recognition
- Onboarding screen for initial explanation

Goal progress:

- Intuitive: two forms of recognition in design
- Intuitive: initially defining in onboarding to make recall easier when looking at two forms of recognition
